Allowance of Application #10/585,559

1. The following communication is in response to applicant's amendment received 16-March-2011. Claims 1-33, 36 and 37 are pending in the application. Claims 34 and 35 are canceled. Further, the specific arguments as presented in applicant's present response, on pages 11-14, are considered persuasive, and therefore the previously applied rejections have been withdrawn.

Examiner's Amendment

2. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee. Authorization for this Examiner's Amendment was given by Chad Wickman (Reg. No. 58,356) on 13-April-2011.

2.1 In the Claims:

Claim 1	Line 5	Change "parameterised" to --parameterized--.
Claim 11	Line 2	Change "corresponding error term" to --corresponding error term e--.
Claim 12	Line 1	Change "the error term corresponds" to --the error term e corresponds--.
Claim 13	Line 2	Change "the changes B" to --the changes δ --.

Art Unit: 2128

storage medium storing a computer program executable by a computer--.

Cancel claims 34 and 35.

Claim 37 Line 7 Change "parameterised" to --parameterized--.

Reasons for Allowance

3. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The present application is directed to a non-obvious improvement over USP 6,424,918 (JORGENSEN et al), which teaches the inversion of gravity and magnetic data and combining the result of the inversion process with seismic data to provide velocity models and to improve depth models to locate possible hydrocarbon bearing zones in areas of anomalies such as salt, or igneous formations.

3.1 Claims 1-33, 36 and 37 are considered allowable, since when reading the claims in light of the specification, as per MPEP § 2111.01, none of the references of record, either individually or in combination, disclose the specific arrangement of elements in the same combination specified in independent claims nos. 1 and 37 for processing seismic data representing a physical system, specifically including a method of data inversion that operates directly on seismic difference data, and in particular to the difference between two sets of measured data representing a system in first and second states, wherein the difference data is inverted in accordance with a parameterized model of the system, in order to provide correct quantitative statistical treatment of the uncertainties in the parameters of the model.

Art Unit: 2128

It is for these reasons that the claims of the present application are found to be patentable over the prior art.

Dependent claims 2-33 and 36 are deemed allowable as depending either directly or indirectly from allowed independent claim no. 1.

3.2 Independent claim 37 further uses “means for” language, and is given deference in view of *In re Donaldson* and interpreted in view of 35 U.S.C. § 112, Sixth Paragraph. The “means for” language, and the limitations related thereto of claim 37, are interpreted within the scope of enablement as provided within the relative embodiment provided within the specification. See p. 12 of applicant’s remarks, received 16-March-2011, for additional details.

Prior Art

4. The prior art made of record but not relied upon, discovered in an updated search, is considered pertinent to Applicant’s disclosure, and consists of:

USP 7,042,802	Sinha
USP 7,072,767	Routh et al

Response Guidelines

5. Any comments considered necessary by applicant **MUST** be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should clearly be labeled “Comments on Statement of Reasons for Allowance”.
